

## June Program

Our program this month will be given by our own Bill Beranek on the topic of selective compression.. Bill has a long history of track planning and will share with us some methods of how he is able to accomplish his designs using selective compression. Bill's program will cover distance, scenery, structures, train lengths, cities and industries, plus he will also show an example of extreme selective compression on a track plan designed for a client.

Normally a program this comprehensive and detailed would take 4 to 5 hours, but Bill has promised to "compress" his program to under an hour! Come and join us for this interesting program given by a track planning professional, Bill Beranek, "The Track Planner".
