

Show and Tell

Jon Weiss September 2023

FosScale – Hendrix Type Foundry: Kit features a hybrid of materials; hydrocal cast stone walls and laser cut wood walls. The stone walls are finger jointed.

I bought this kit because I liked its look and the challenge of working with hydrocal (never worked with it before). Kits like this allow me to learn new techniques and force me to solve problems as they come up. I'm now ready for the next hydrocal structure.

I brought 2 products by AMMO by Mig (AK Interactive & Vallejo make similar products)

- 1) acrylic MUD texture for dioramas (comes in 7 colors) – not to be used on vehicles or structures. Apply it with a brush, pallet knife, and/or sponge. Great texture and can be weathered. Dries overnight. AMMO has video on its use.
- 2) acrylic MUD Vignettes (various colors) – similar to #1 but can be used on structures and vehicles. Not as thick and the finished texture is a bit more refined.

On-line suppliers of these types of products (various brands) are:

MegaHobby

Spruce Brothers Models – they currently carry the MUD line

Scalehobbyist.com
