

Our May program will be given by our own Bob Sobol on understanding sound decoders. Bob has done a lot of research into the various sound decoders available to us (Why? Because this is what Bob does!) and will give us some insights into the differences plus a demonstration on the differences as well. As always, Bob will give us a great look into the "inside scoop" of sound decoders, so don't miss this chance to learn about sound decoders available in model railroading.
